The mobile duo offers flexibility and versatility.

The mobility and stability of the AHL320 – combined with a lorry – make it ideally suited to handling scrap. All of the material handler’s attachments can be mounted on the lorry itself. A retainer for the magnetic plate, for example, is fitted to the lorry. The clamshell grab can be folded in and secured, so it does not need to be dismantled for transport purposes. These cost and time saving benefits make this material handler the perfect choice for rapid deployment in frequently changing locations. A further highlight is the option of standalone operation, in which the AHL320 can be operated as a freestanding unit, without a lorry. The telescopic 4-point plinth reliably guarantees maximum stability, while the clamshell grab can handle scrap by the tonne.

Customer’s conclusion
“The company of OLMET Sp. Z.O.O. has been a successful business for 21 years. We also have Terex® Fuchs to thank for this, and the high quality of the AHL320. Since we frequently have to change the location where it is deployed, we are utterly delighted at the speed with which the machine can be moved. With the changeover frame, the machine can rapidly be attached to the lorry – we no longer need to use a trailer or low-loader.”

Przemyslaw Oles, Director, OLMET Sp. Z.O.O.
